Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-8307
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Intake	Create an incident in ServiceNow with Short Description and Description fields.
FR-2	Flow Trigger	Trigger the Flow Designer workflow automatically when a new incident is created.
FR-3	Keyword Analysis	Analyze keywords from the Short Description and Description fields.
FR-4	Automatic Classification	Match keywords to predefined rules and assign the relevant category automatically.
FR-5	Category Mapping	**Wi-Fi / network / internet** → Network **Projector / display / screen** → Hardware / AV **Password / login / account** → Access / Password **Slow / hanging / performance** → Performance / Computer
FR-6	Ticket Update	Update the incident category with the classification result without requiring manual IT staff assignment.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Classification should occur automatically with minimal manual intervention for helpdesk staff.
NFR-2	Security	The flow should process only the incident information required for classification and respect ServiceNow access controls.
NFR-3	Reliability	The classification flow should apply the defined keyword rules consistently for new incidents.
NFR-4	Performance	Classification should be completed promptly after incident creation so the category is available to IT staff.
NFR-5	Availability	The workflow should operate whenever the ServiceNow incident and Flow Designer services are available.
NFR-6	Scalability	The rule-based flow should support increasing numbers of school IT incidents without requiring manual classification for each ticket.
