User Acceptance Testing (UAT) Template

Date	08 October 2026
Team ID	SWTID-2026-8307
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	—

Project Overview:

Project Name	Auto Ticket Classification using Flow Designer
Project Description	Automates school IT helpdesk incident classification in ServiceNow. The Flow Designer analyzes keywords from the Incident Short Description and Description fields and assigns the relevant category.
Project Version	Version 1.0
Testing Period	08 October 2026 to 08 October 2026

Testing Scope:

Features and functionalities to be tested: Incident creation, Flow Designer trigger, keyword analysis, category assignment, handling of supported keyword groups, and output consistency.

User stories / requirements to be tested: IT staff should receive incidents with the relevant category assigned automatically for Network, Hardware / AV, Access / Password, and Performance / Computer scenarios.

Testing Environment:

URL/Location	ServiceNow Incident / Flow Designer environment
Credentials	Use authorized project/test credentials. Do not record passwords in this document.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Network ticket	Create Incident with Short Description/Description containing Wi-Fi or network.	Category assigned as Network.	To be recorded during UAT	Pending
TC-002	Internet issue	Create Incident containing internet keyword.	Category assigned as Network.	To be recorded during UAT	Pending
TC-003	Projector / display issue	Create Incident containing projector, display, or screen.	Category assigned as Hardware / AV.	To be recorded during UAT	Pending
TC-004	Password / login issue	Create Incident containing password, login, or account.	Category assigned as Access / Password.	To be recorded during UAT	Pending
TC-005	Slow computer	Create Incident containing slow, hanging, or performance.	Category assigned as Performance / Computer.	To be recorded during UAT	Pending
TC-006	Negative / unmatched case	Create an Incident without any configured classification keyword.	No unsupported category should be incorrectly assigned; behavior is recorded during UAT.	To be recorded during UAT	Pending

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Record only if a classification or flow execution defect is found.	1. Create the affected Incident. 2. Run/trigger the flow. 3. Verify the assigned category.	Low / Medium / High	Open / In Progress / Closed	Document observed behavior and suggested improvement.

Sign-off:

Tester Name	_____
Date	_____

Notes:

• Ensure that all test cases cover both positive and negative scenarios.

• Encourage testers to provide detailed feedback, including suggestions for improvement.

• Bug tracking should include severity, status, and steps to reproduce.

• Obtain sign-off from the project manager and product owner before proceeding with deployment.
