Problem-Solution fit canvas 2.0

Purpose / Vision

Auto Ticket Classification using Flow Designer | Team ID: SWTID-2026-8307

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

- Students and teachers who submit school IT incidents.

- IT helpdesk staff who process and classify incoming incidents.

6. CUSTOMER CONSTRAINTS — CC

- High volume of incidents can make manual classification repetitive.

- Descriptions may be short, unclear, or use different wording.

- Rules depend on consistent keywords and category mappings.

- ServiceNow and Flow Designer must be available for automation.

5. AVAILABLE SOLUTIONS — AS

- Current solution: IT staff read each incident and manually assign a category.

- ServiceNow incident records provide the ticket details used for review.

- Manual review is workable but consumes time and can produce inconsistent classification.

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

- Classify incidents quickly and consistently after they are created.

- Reduce repetitive manual review for the IT helpdesk.

- Help route common Wi-Fi, AV, access, and computer-performance issues to the right category.

9. PROBLEM ROOT CAUSE — RC

- The helpdesk currently relies on people to interpret incident descriptions and choose categories manually.

- As ticket volume and wording variety increase, this creates repetitive work and opportunities for inconsistent classification.

- Root cause: classification is not automated when the incident is created.

7. BEHAVIOUR — BE

- A student or teacher submits an incident with a Short Description and Description.

- IT staff open the incident, read the text, identify keywords, and assign a category.

- Staff continue support after classification.

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

- A new incident is created in ServiceNow.

- Common triggers include Wi-Fi/network issues, projector failures, login/password problems, and slow computers.

4. EMOTIONS: BEFORE / AFTER — EM

- Before: frustrated, delayed, or uncertain whether the ticket will be categorized correctly.

- After: more confident that the incident is organized and ready for IT follow-up.

10. YOUR SOLUTION — SL

- Flow Designer is triggered when a new incident is created.

- Analyze the Short Description + Description fields.

- Match predefined keywords to categories.

- Wi-Fi / network / internet -> Network
- Projector / display / screen -> Hardware / AV
- Password / login / account -> Access / Password
- Slow / hanging / performance -> Performance / Computer

- Automatically update the incident Category field.

8. CHANNELS of BEHAVIOUR — CH

8.1 ONLINE

- ServiceNow incident form
- Short Description and Description fields
- ServiceNow incident list / helpdesk queue

8.2 OFFLINE

- Face-to-face requests to school IT staff
- Classroom/device context shared verbally
- Technician follow-up during support
