Project Development Phase

Model Performance Test

Date	08 October 2026
Team ID	SWTID-2026-8307
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	10 Marks

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	**Model Summary**	ServiceNow Flow Designer automation for IT ticket classification using the Incident *Short Description* and *Description* fields. Configured keywords are matched to automatically assign the relevant category. **Note:** If the ticket contains matching keywords, the corresponding category is assigned automatically; otherwise the configured fallback/no-match handling is followed.	Attach ServiceNow Flow Designer / execution screenshot
2.	**Accuracy**	**Training Accuracy -** Not applicable to the current rule-based implementation. **Validation Accuracy -** To be calculated using a labeled set of test incidents by comparing the expected category with the category assigned by the flow.	Attach classification test-results screenshot
3.	**Confidence Score**	**Classification Confidence -** Not applicable to the current keyword-rule implementation. The flow assigns a category when configured keywords are matched rather than producing a probabilistic confidence score. **Recommended evidence:** Show the matched keyword and resulting category in the ServiceNow incident.	Attach incident/category result screenshot
