Project Development Phase

Model Performance Test

Date	08 October 2026
Team ID	SWTID-2026-8307
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	—

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1	**Model Summary**	ServiceNow Flow Designer automation for IT incident classification using the Short Description and Description fields. The flow analyzes configured keywords and assigns the relevant incident category automatically. **Note:** When an incident is created, matching keywords should result in the corresponding category being assigned. If no configured keyword matches, the ticket should follow the defined unmatched/default rule.	Attach ServiceNow Flow Designer / incident screenshot here.
2	**Classification Accuracy**	**Test Accuracy:** To be recorded after executing the classification test cases. **Correct Classification:** Percentage of test incidents assigned to the expected category. **Incorrect Classification:** Percentage of test incidents assigned to the wrong category.	Attach test-results screenshot here.
3	**Classification Confidence / Consistency**	For the configured keyword-based Flow Designer rules, performance is evaluated through consistent category assignment for the same keyword patterns. **Consistency:** Repeated incidents containing the same classification keywords should receive the same category.	Attach repeated-test / incident screenshots here.

Project-specific categories tested: Network; Hardware / AV; Access / Password; Performance / Computer.
